

**Information Concerning SBI 54 on Gender and Climate Change  
for the Lima Work Programme on Gender  
Mandate: Table 1, A.4, Annex to 3/CP.25**

*Submitted by Landesa*

March 2021

This submission is respectfully submitted by Landesa,<sup>i</sup> a leading international land tenure organization dedicated to securing gender-equitable land rights for people living in poverty in rural areas, with experience in over 50 countries. Landesa is currently exploring synergistic implementation efforts that link climate change agendas, the Sustainable Development Goals (SDGs), and human rights norms and standards, building on previous work.<sup>ii</sup>

The submission is in response to the request to share experiences on dimensions and examples of the gender differentiated impacts of climate change, the role of women as agents of change and opportunities for women. Our recommendations intend to “strengthen the evidence base and understanding of the differentiated impacts of climate change on men and women and the role of women as agents of change and on opportunities for women.”

***Gender-equitable land rights are central to the climate change agenda, to integrating climate change frameworks with the SDGs and human rights norms and can support and accelerate gender-responsive action in all three realms.***

States have human rights obligations linked to climate change, derived from legally binding commitments under international human rights treaties as well as the UNFCCC Paris Agreement, which calls upon Parties to respect, promote and consider their respective human rights obligations when taking climate action. Likewise, the 2030 Agenda is grounded in human rights principles and content and demonstrates the interlinkages between climate change, sustainable development, and human rights. The goal of the SDGs is to “leave no one behind,” and to “reach first those who are furthest behind,” and to accomplish these goals in fulfillment of international human rights norms.<sup>iii</sup> Achieving these common and interdependent goals requires judicious use of resources across these agendas.

Yet gendered considerations in these arenas are often overlooked. The voices of women and gender minorities are woefully underrepresented in most decision-making spaces,<sup>iv</sup> but this lack of representation is especially acute within land governance agencies, community-level councils, and traditional justice mechanisms.<sup>v</sup>

Focusing on land rights in the context of global agendas is crucial for overcoming gendered inequalities and for “leaving no one behind.” Landesa works to secure gender-equitable rights to land as a foundational element for climate action, achieving the SDGs, and fulfilling human rights. In many places worldwide, women and girls make up the majority of those depending either directly or partially on smallholder agriculture for livelihoods and subsistence;<sup>vi</sup> land is their most crucial asset, but women continue to face barriers to their land and inheritance

rights in more than half the world's countries, under formal or customary law.<sup>vii</sup> Women who reside in rural areas and depend on land are also experiencing multiple and intersecting forms of discrimination,<sup>viii</sup> and rural women experience the most extreme forms of marginalization and poverty.<sup>ix</sup> These women carry an increased burden of care and domestic work relative to women in more urban areas, and are less likely gain access to and participate in government services and programs.<sup>x</sup>

Ensuring women's rights to land constitutes a foundational aspect of gender equality as enshrined in climate change frameworks and human rights treaties. Secure rights to land are often a precondition, allowing women to realize their rights to an economic livelihood, equality, adequate living conditions, housing, education, health, freedom from violence, and participation in decision-making.<sup>xi</sup> And rights to land, especially for women, are increasingly being recognized within and linked to human rights,<sup>xii</sup> and recognized for their contribution to climate action and sustainable development. When land governance and management protect women's rights to land, other beneficial outcomes result:

- **Mitigation and adaptation of climate change:** Emerging evidence suggests that when women hold secure rights to land, efforts to tackle climate change are more successful.<sup>xiii</sup> Women, especially rural women, should be included and empowered in policymaking and implementation of policies that link infrastructure, land management, and climate change.<sup>xiv</sup>
- **Political efficacy:** Research shows that the more influence women hold over land, the more they will be involved in local-level decision making.<sup>xv</sup> And rights to land are likely to contribute to women's influence more broadly — greater levels of assets correlate with greater levels of political involvement<sup>xvi</sup>; when women have greater economic power, including via control over land, they will also have greater political power.
- **Increased influence for women in household decision-making:** When women have secure rights, they enjoy enhanced intra-household bargaining and decision-making power, which in turn can lead to better outcomes for the family as a whole<sup>xvii</sup> and greater freedom to participate in government or development initiatives.
- **Increased household income:** Women with land rights contribute a greater proportion of income to the household and exercise greater control over agricultural income.<sup>xviii</sup> Extending equal land rights to women can benefit them and their families by increasing the amount and varying the sources of their income.
- **Improved food security:** When women own a larger share of the household's farmland, families allocate a larger proportion of their household budget to food.<sup>xix</sup> This impact goes beyond individuals and households: all women and girls worldwide require food security and sustainability, whether they live in rural areas or urban, and whether or not their primary livelihood is agriculture. Strengthening gender-equal rights for the smallholder farmers, who produce a third of the global food supply,<sup>xx</sup> is a key route to achieve equity, help migration occur sustainably and maintain peace and social stability,<sup>xxi</sup> and provide food for everyone.
- **Increased agricultural productivity:** Secure land rights generally have been shown to increase agricultural productivity<sup>xxii</sup>—which contributes to increased incomes at the household level as well as greater economic growth and food security.<sup>xxiii</sup> Securing land tenure for women specifically is now especially crucial as increased concentration and commodification of land causes men (predominantly) to migrate for work, leaving women to work the land with fewer resources and inadequate authority to make decisions.<sup>xxiv</sup>

- **Subsidies, programs, credit:** Having proof of rights to land is often a prerequisite for access to government and development programs, including agricultural extension, training, and contracting or cooperative arrangements, yet women often lack this proof.<sup>xxv</sup> Securing women’s rights to land creates more gender-equal links to these services, and in turn creates better access to markets for women and girls via these links.
- **Education:** When women in the household have land rights, children have higher levels of educational attainment.<sup>xxvi</sup>
- **Health:** Securing women’s land rights results in improved household nutrition; the odds that a child is severely underweight are reduced by half if the mother owns land. Land rights also result in a reduced incidence of HIV; women with greater economic strength and status gained from land rights are better able to negotiate safe sex with husbands, less vulnerable to transactional sex for survival, and better able to cope with the costs of disease within the family if it does occur.<sup>xxvii</sup>

***Vertical coordination of efforts at international, national, and local levels can significantly contribute to coherence and other GAP Priority Areas.***

A wide variety of stakeholders—government, civil society, and the private sector—must be engaged and coordinated to implement the GAP, and integration with other global agendas bolsters efforts for gender-responsive action. This kind of national-level coordination is essential for policy coherence and for implementation of all global agendas, but it will require significant support.

Civil society actors can and do play an important role in vertical coordination between global, national, and local levels to achieve global agendas, in line with suggestions related to vertical coordination and better inclusion of and visibility for the work of actors at the national and grassroots levels. Civil society can also play a key role, focused on synergies with the 2030 Agenda for Sustainable Development, by supporting more inclusive efforts on data gathering and supporting implementation and capacity development in collaboration with government actors. Below are examples from our work and the work of our partner organizations at national levels, including examples from Myanmar, Brazil, and Kenya:

At the national level, for example, National Human Rights Institutions (NHRIs) are uniquely placed to support integrated implementation of climate change frameworks, the SDGs, and human rights norms and standards. Landesa is currently exploring global agenda integration work with Myanmar’s NHRI (see examples below), to assess their role particularly in awareness raising for greater inclusivity in global agenda implementation, as well as playing a national-level coordination role across agendas. NHRIs are independent State institutions, established by constitutional or legislative authority, mandated to ensure national compliance with international human rights commitments.<sup>xxviii</sup> The Paris Principles establish NHRIs’ mandate;<sup>xxix</sup> they include a wide range of functions implicating the 2030 Agenda for Sustainable Development which could also be integrated with climate action at the national level:<sup>xxx</sup> monitoring and reporting, advising the government on human rights issues, cooperating with national, regional and international bodies, and building knowledge on human rights.<sup>xxxi</sup>

Awareness-raising conducted by or in collaboration with NHRIs could tie to implementation of the GAP under Priority area B: gender balance, participation, and women’s leadership, by leveraging NHRIs’ engagement in human rights education at national and local levels.<sup>xxxii</sup> Human rights education is a core NHRI mandate.<sup>xxxiii</sup> SDG Target 4.7 calls for HRE to promote attitudes, beliefs, behavior, and skills for inclusive development and human rights

fulfillment.<sup>xxxiv</sup> In addition to build capacity for government officials and civil society on human rights norms, NHRIs often conduct HRE in remote and marginalized communities, where addressing issues of inequality (especially gendered inequalities) requires significant shifts in social norms.<sup>xxxv</sup> When NHRIs are equipped with integrated information about climate change, the SDGs, and human rights, they can influence and support needed social and behavior change to achieve shared goals. Providing capacity development to NHRIs to support integrated implementation of global agendas could also meet multiple needs identified related to gender-responsive implementation—identifying national and local-level beneficiaries, stakeholders, and responsible actors for implementing the GAP.<sup>xxxvi</sup>

### ***Additional examples of efforts toward integrated implementation of global agendas (ongoing and planned):***

In Brazil, Espaço Feminista has developed a local-level model for global agenda implementation. They are aiding groups of women to use data to advocate and partner with policy makers to change and implement policies in line with the SDGs. Espaço Feminista began developing this model in 2011, recognizing women and communities as agents of change and sustainable development. They are now applying the model to strengthen women's land rights: collecting data to monitor the SDGs and empowering grassroots women to use that data to lobby local, regional, and national government officials for changes in policies that hinder women's rights to land, and for implementation of policies that favor them. They are building alliances with government and other stakeholders, and empowering women and communities in the process. Espaço Feminista plans to replicate this model within and outside Brazil to strengthen women's land rights locally and globally, by identifying and sharing lessons and good practices. This model could be adapted and piloted in Brazil to more specifically include climate change agendas and human rights mechanisms and obligations.

In Kenya, GROOTS Kenya is a grassroots organization engaged in SDG implementation to promote gender equality and engaged and empower local women.<sup>xxxvii</sup> GROOTS has been active in closing the data and gender equality gaps, bringing government officials to local areas to understand land issues and build rapport with rural communities. For GROOTS, the SDGs' inclusion of land was crucial. They were already collecting data on what impacts women most: land, agriculture, education, water, and health. The SDGs created new political will and provided a framework to reconstruct their tools, aligning with land-related indicators under SDGs 1 and 5. They are now digitizing data, and collecting individual-level data to include women and identify any perceived threats to women's land tenure. They have seen huge gains; when they used data to inform government officials that women were walking 12 kilometers for water, the government set up water kiosks.<sup>xxxviii</sup> GROOTS is also well-placed to play a key role in an inclusive and integrated approach to implementing global agendas at the national and local levels.

Over the past several years, Landesa has extended and strengthened our collaborative efforts with multiple partners to protect and enhance women's land rights as a foundational aspect of climate action,<sup>xxxix</sup> achieving the SDGs,<sup>xl</sup> and fulfilling human rights.<sup>xli</sup> Our efforts and those of our partners have contributed to the significant and exciting progress in these agendas over the last three years: the three land-specific SDG indicators have agreed-upon global methodologies and create a mandate for governments to collect data; land is increasingly recognized as an “ecosystem” undergirding all of the SDGs, spanning gender equality, climate change and its impacts (including land degradation and biodiversity loss), poverty, food security, institutional capacity, sustainable cities, and decent work; and there is growing recognition of gender-

equitable rights to land as a central and crucial component of human rights fulfillment, and land as a stand-alone right is increasingly a key human rights mandate to governments.<sup>xlii</sup>

Strategic efforts are needed to harness this momentum. To build on our prior engagement in both realms, and to maximize our impact as we assist governments and other actors to more effectively use resources to achieve common goals, we are designing our work to leverage the significant ideological, institutional, and practical overlap and interactions between these agendas. This integrated approach will contribute to globally leveraging the commitments, mechanisms, and institutions related to climate change agendas, the SDGs, human rights, global and regional agendas specific to land, and the synergies between these realms, and taking a participatory and inclusive approach to amplify the voices, presence, and power of marginalized groups in national, regional, and global spaces. Over the next year, implementation work related to this integrated “co-implementation” approach will include the following pilot activities:

- Supporting efforts to jointly implement climate change frameworks, human rights norms, and the SDGs in Myanmar via capacity development tailored to the Myanmar National Human Rights Commission and other Myanmar government and civil society partners;
- Collaborating with the Global Initiative for Economic, Social, and Cultural Rights (GIESCR) to implement Concluding Observations and General Comments and Recommendations from treaty-monitoring bodies (including CEDAW General Recommendation No. 37 on gender-related dimensions of disaster risk reduction in the context of climate change<sup>xliii</sup>), with a focus on Kenya and Tanzania;
- Supporting efforts to localize and implement the SDGs in Tanzania, working with a multi-stakeholder sub-committee within the Mainstreaming Gender Macro-Group, to help them implement the strategy and action plan they had developed last year;
- Engaging with government and civil society organizations to advance legal and policy changes to strengthen women’s land rights in line with Tanzania’s commitments under the global agendas;
- Enhancing stakeholders’ access to data to diagnose and track progress on women’s land rights;
- Encouraging and supporting reporting on progress toward women’s land rights under the SDGs.

## Conclusion and Recommendations

These efforts are presented as examples to support the work of the LWPG in integrating a gender-responsive approach across the work of the UNFCCC constituted bodies and to support States parties in fulfilling their obligations under the UNFCCC. Work to integrate climate action at the national level with efforts to achieve the SDGs and fulfill human rights obligations will strengthen efforts under the UNFCCC and lead to greater impact and more sustainable results. We recommend that the LWPG:

- Promote the efforts described above and similar efforts.<sup>xliv</sup>
- Promote the role of coherence with human rights frameworks for achieving gender-responsive climate action.<sup>xlv</sup>
- Encourage States’ Parties delegations to the UNFCCC to engage and collaborate with national level entities responsible for SDG and human rights implementation, as well as with delegations and actors responsible for implementation of the two other Rio

Conventions, and to include information on efforts for integrated implementation of global agendas into their reporting under the UNFCCC.<sup>xlvi</sup>

- Collaborate with civil society actors and States Parties to hold coherence activities (starting with workshops) at both national and global levels across climate change frameworks, the SDGs, and human rights norms and standards.

<sup>i</sup> Landesa is an international nonprofit organization dedicated to securing gender-responsive land rights for rural people living in poverty. Landesa has worked in over 50 countries and has contributed to over 110 million families gaining legal land rights, using a combination of robust research, collaborative law and policy design, dedicated advocacy, and tailored evidence-based interventions, [www.landesa.org](http://www.landesa.org)
